

Barrel-shaped wall and ceiling sound diffusers are an effective way to disperse and redirect sound, to eliminate “dead spots” and evenly distribute it throughout a listening environment. These diffusers are comprised of rigid, molded E-glass to create a high impact, strong surface that is lightweight and durable. Sound Acoustic Solutions offers a 2' x 2' or 2' x 4' Barrel Diffuser that is extremely effective, both on the wall and as a ceiling tile for grid ceilings. This product is sold in a standard white gel coat, and is paintable to match the surrounding design of the room. With a variety of different hanging/mounting options available, this product is able to be installed virtually anywhere diffusion is needed.

Features:

- Model: Barrel
- Core: Rigid E-Glass Diffuser
- Finish: White Gel Coat
- Size: 2' x 4'
- Hanging/Mounting: Z-Clips or Velcro for Wall Mount
- Thickness: 3-Dimensional Convex Design
- Density: 1.5 lbs. / sq. ft.
- Edges: Beveled E-Glass
- Flammability: Class "A" Fire Rated (ASTM E84)

Installation

- Mounting Surface: Wall or Ceiling
 - Application: Wall or Ceiling Diffusion
- Ceiling Panel – Interactive Absorber, or Wall Panel – Diffuser
